

# OVERVIEW

## CDC'S OFFICE ON SMOKING AND HEALTH (OSH)

OSH is at the forefront of the nation's efforts to reduce deaths and prevent chronic diseases that result from tobacco use. The agency and its partners promote tobacco control interventions, including actions to prevent youth from starting to use tobacco, smoke-free environments, programs to help tobacco users quit, and steps to eliminate tobacco-related health disparities in different population groups.

## OPEN DATA

Access a wide range of chronic disease data, risk factor indicators, and policy measures in Open Data. Increasing and improving access to CDC's chronic disease and health promotion data and indicators is a key component of addressing the burden of chronic diseases in the United States. Chronic diseases are the main causes of poor health, disability and death and account for most health-care expenditures. Tobacco use remains the leading preventable cause of disability and death in the United States.

## TRACKING AND VISUALIZING DATA

Through OSHData, OSH presents comprehensive tobacco prevention and control data online in an easy to use, interactive application available to states, researchers, media, and the public. Users can visit the site and obtain the latest data across many topics, download data for more analysis or share ready-made graphs and maps.
